Wheat Cultivation and Irrigation Schedule

Wheat (Triticum aestivum) is a premier rabi winter cereal crop.

Optimal Sowing Time:

The ideal sowing period is from the first fortnight to late November when soil temperature is 20-22 deg C.

Critical Irrigation Stages:

1. Crown Root Initiation (CRI) stage: 20 to 25 days after sowing (Most critical).
2. Tillering stage: 40 to 45 days after sowing.
3. Jointing stage: 60 to 65 days after sowing.
4. Flowering stage: 80 to 85 days after sowing.
5. Milk / Dough stage: 100 to 105 days after sowing.

Weed and Nutrient Management:

Apply nitrogen, phosphorus, and potassium in a balanced 4:2:1 ratio (NPK 120:60:40 kg/ha).
